

Domain registration and hosting

1. Compare the features and pricing of two shared hosting plans from different providers (e.g., Hostinger vs Bluehost) and create a table listing at least 5 key differences relevant for a small ecommerce website like Flipkart.

Feature	Hostinger	Bluehost
Price	₹149/month	₹299/month
Storage	50 GB SSD	10 GB SSD
Free Domain	Yes	Yes
Free SSL	Yes	Yes
Email	Free	Free

2. Explain the difference between domain registration and web hosting using an analogy with Instagram usernames and photo storage, in 3-4 sentences.

A domain name is like your Instagram username because it is the unique address people use to find your profile. Web hosting is like Instagram's storage, where all your photos, videos, and profile information are stored. Without a domain name, people cannot find your website, and without web hosting, there is no content to display. Both are required to make a website accessible on the internet.

3. Use ChatGPT to generate a checklist of 7 steps required to launch a basic website (from domain search to going live), and paste the checklist into your assignment submission

Website Launch Checklist

- ☐ Search for an available domain name.
- ☐ Register the domain or choose a free subdomain.
- ☐ Sign up for a web hosting service.
- ☐ Create the website files (HTML, CSS, JavaScript, images, etc.).
- ☐ Upload the website files to the hosting server using File Manager or FTP.
- ☐ Connect the domain to the hosting account (if required).
- ☐ Test the website and make it live.
